Demo 1

Tuscan is an e-commerce website has 2 architectural diagrams (Monolith and Microservices). Compare the 2 diagrams and draw conclusions from what you have learnt in Module 1

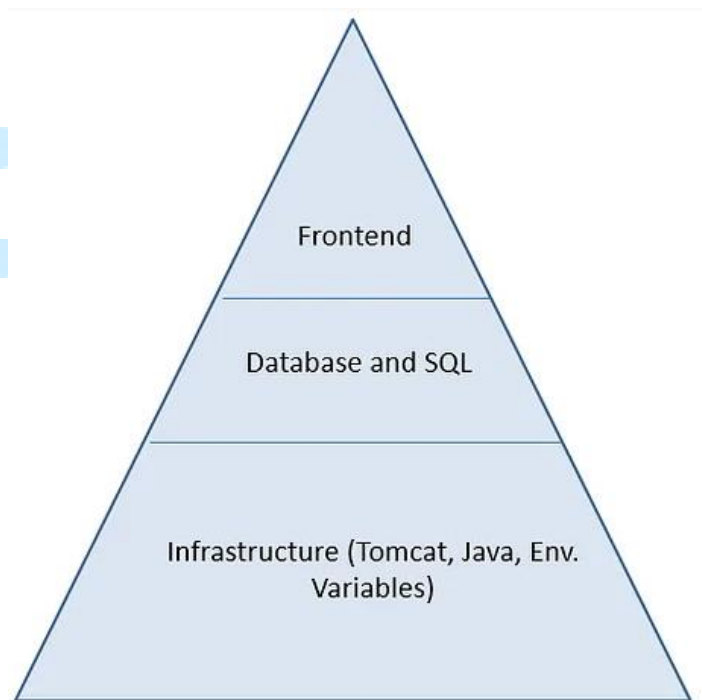

Monolithic Diagram:

Your monolithic Domains may include:

- Infrastructure Components (java runtime, Tomcat, Environment. Variables)
- Database and SQL (.sql)
- The Website Frontend (.jar)

To visualize this, we can use a triangle that shows the lowest to the highest level of dependencies.

This is a simple organizational method that can be useful for our more complex service-based architectures

Monolithic Architectural Diagram:

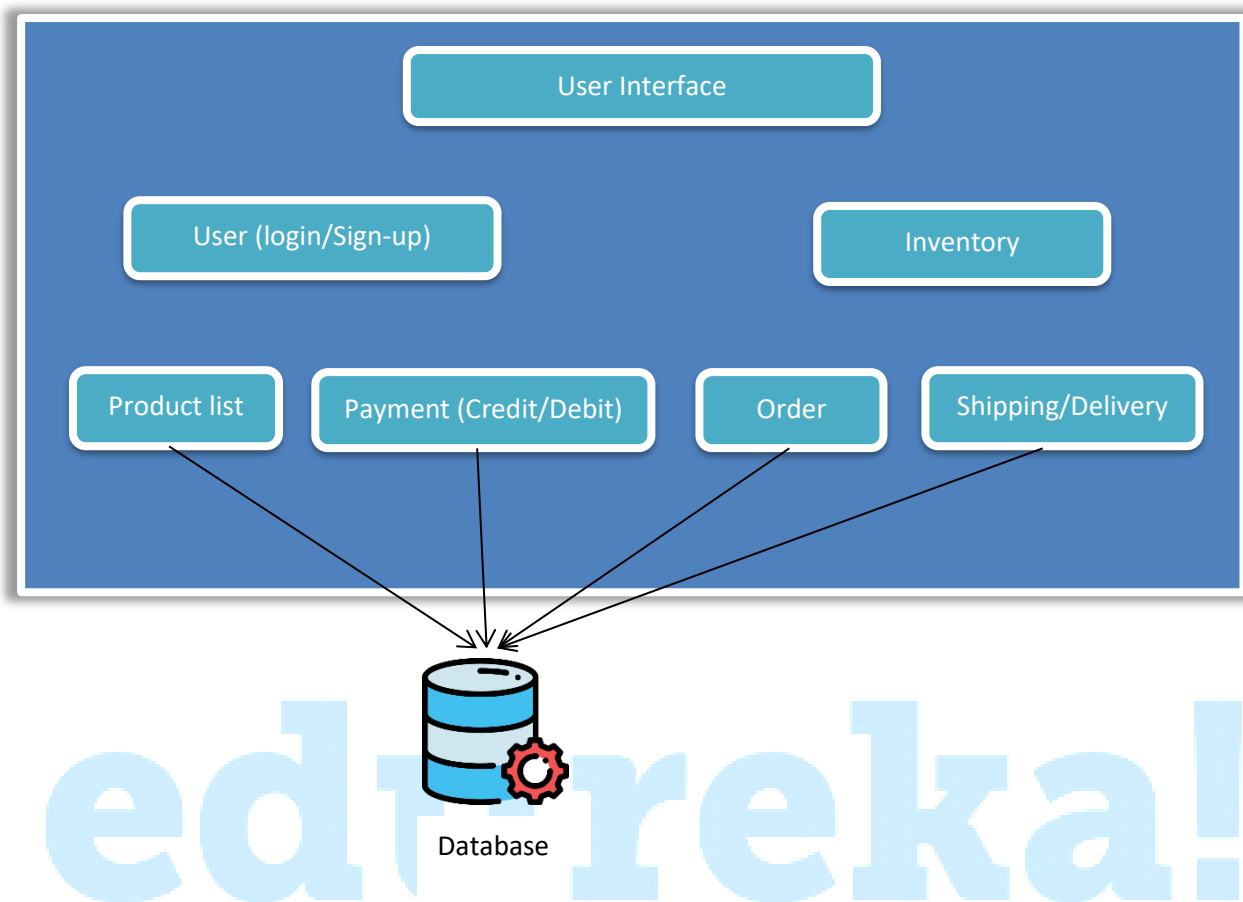

Diagram illustrating a shopping cart flow. A blue box labeled "Cart" is connected by lines to a blue box labeled "Shipping/Delivery" and a database icon (cylinder).
